

How to Help Prevent the Spread of COVID-19 in the Home

The surfaces in rooms throughout the home can be susceptible to the spread of COVID-19. You can help prevent the spread in your home by following CDC guidelines for infection prevention protocol and disinfecting hard, nonporous surfaces using an EPA-registered disinfectant.

Common Spaces (LIVING ROOM, FOYER, HALLWAYS, DINING ROOM)

Disinfect daily: door handles, doorbells, key entry pads and other shared surfaces, especially after receiving deliveries or returning home.

Reusable bags brought out of the house should be washed upon entering.

Disinfect anything you handle frequently:

- Recycling or trash bins
- Remote control
- Hairdryer
- Toys
- Pet toys & leashes

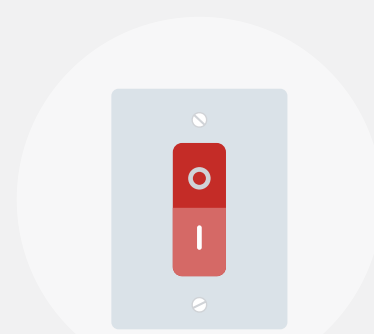

Disinfect commonly touched surfaces in the bedroom with a disinfecting bleach solution:

Closet door handles & doorknobs

Bedside table & drawer pulls

Light switches

Bedroom

Bathroom

If sharing a bathroom, wear disposable gloves and disinfect surfaces after every use.

To disinfect the toilet bowl, flush the toilet, then add 1/3 cup bleach to the water in the bowl. Scrub with a toilet brush, then let stand for 6 minutes before flushing again.

To disinfect the shower or bathtub, start by removing bathmats and other items, wipe the tub/shower with the bleach solution, wait 6 minutes and then rinse the tub/shower with warm water.

Always follow the product label's instructions for proper usage for dosing instructions.

Put dishwasher rinse cycle at the highest temperature to kill the most germs.

Wash dishes and utensils with gloves and hot water after each use.

Disinfect commonly shared surfaces against COVID-19:

Countertops & cabinet handles

Refrigerator doors

Trashcan lids

Faucets

Kitchen

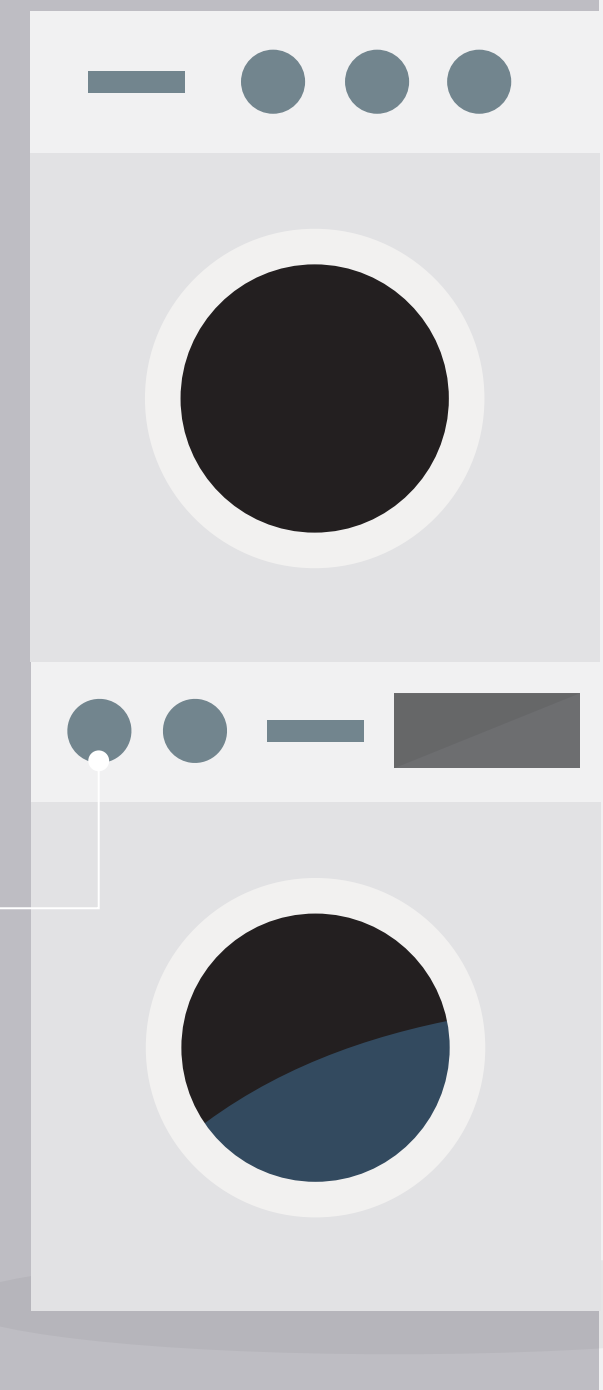

Laundry Room

When handling laundry, wear disposable gloves if available.

It's important to remember not to shake out your sheets or towels.

Wash and dry your clothes at the highest temperature by your item's tag or label for at least 30 minutes.

Always follow the product label's instructions for proper usage or dosing instructions. For a full list of products EPA approved to disinfect against COVID-19, visit the CDC website.
